

**1. Can I use alcohol tester immediately after drinking alcohol?**

A:It takes certain amount of time for the alcohol in stomach to be absorbed into blood. To get a more accurate test result which can reflect the Blood Alcohol Content well, please abstain from smoking and drinking (for at least 15-20 minutes) before test.

**2. Am I safe to drive if my alcohol breathalyzer shows that I'm under the legal limit?**

Absolutely Not. Breathalyzers are for informational purposes only and there is no acceptable level of alcohol consumption that makes it safe to drive. Any alcohol that enters a person's body can impair reflexes, motor skills, and cognitive abilities.

**3. Does it comes with mouthpieces?**

Yes, it comes with 10 mouthpieces.

**4. Can we calibrate alcohol tester by ourselves? Does it comes with spare sensors?**

You can calibrate it if you have calibration equipment, there is no spare sensors.

**5. What is calibration interval?** Once a year or after 1000 times uses.
